Sheet 2 of 6			

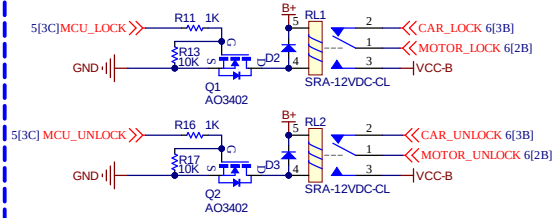

The circuit diagram shows a precision current source. The op-amp U3 (SM8103ADC) is configured with its non-inverting input (pin 5) connected to a voltage divider consisting of C10 (10M0605) and a 100kΩ resistor (R10, not explicitly labeled but implied by the circuit). The inverting input (pin 6) is connected to the output (pin 4) through a feedback network consisting of R2 (5k1Ω) and C1 (100nF). The output (pin 4) is connected to the load (R3, 6.8kΩ) through a buffer stage consisting of U2 (XR0630-4R7M) and C5 (100pF). The load is connected to ground through R3. The circuit is powered by VCC-B and ground (GND). Test points TP2, TP3, and TP4 are indicated for measurement.
